DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-15 are rejected under 35 U.S.C. 102(b) as being anticipated by Comeau et al. (US 2002/0154435 A1).

Note that Figure 3 of the Comeau et al. reference discloses an amplifier apparatus (all elements of Figure 3 except read-head 12) for use with a sensor (read-head 12), wherein the amplifier apparatus comprising: a first amplifying circuit segment (Q1, Q2) and a second amplifying circuit segment (Q3, Q4) each of which including a first transistor device (Q1 or Q4) and a second transistor device (Q2 and Q3) coupled in parallel; and a feedback unit (20, C1, C2, R_{RFB1}, R_{RFB2}) coupled with the first and second amplifying circuit segments, wherein the feedback unit receiving signals from each of the first (Q1 or Q4) and second (Q2 or Q3) transistors of the first and second amplifying circuit segments, the feedback unit is for providing feedback signals to at least the first and second transistors of the first and second amplifying circuit segments to effect substantially balanced signal handling of signals by the first and second transistors (see paragraphs [0022] and [0023]). Note that the sensor (read-head 12) is a read-head in a data storage device (disk drive), and wherein the first transistor is a MOS transistor and the second transistor is a bipolar transistor (as suggested by the Comeau et al. reference, see lines 3-5 of paragraph [0080]).
